

Nurturing Nature National Gold Medal WINNER in the Green Apple Awards for environmental best practice November 2001 - The Waste Buster Range

'This is a perfect example of us working with nature to allow it to look after itself - and ourselves'.

Waste Busters are fun and easy to use & offer continual fascination & interest with free perfect compost as a reward. The use of wooden container eliminates the problems usually associated with plastic wormeries. The worms work and breed in a natural environment in a single large space. They will not need to be replaced as they will not suffer from sudden changes in outside temperature or die if they are too wet or cannot get easy access to their food. They will work on hard-standing indoors or outside. They are very straightforward to look after and produce excellent worm compost. 'Waste' goes in at the top and the system is continuous resulting in quality compost that is harvested on a regular basis from the bottom. Observation/education models with a glass window available in each size. The design allows for a continuous fresh air supply to the unit. Smells do not accumulate. The Waste Buster is suitable for organic waste disposal, worm breeding and educational purposes. As with all wormeries these models need an initial inoculation of fresh worms

Choose a size to suit you and your family.

The Waste Buster Mini is small compact unit that is neat & tidy in appearance. It has been designed to dispose of kitchen scraps, waste paper and cardboard. Ideal for 1-2 people.

Approx. 61 x 35 x 47cm (24" x 13.5" x 18").

The Waste Buster Midi is capable of dealing with kitchen waste and a small amount of garden waste generated by a family of 4. Approx. 61cmx43cmx51cm (24"x17"x20"). When fully operational the Midi Waste Buster will compost about 4 Kgs of organic waste a week.

The Waste Buster Maxi for larger families from 6 people will compost up to 8 Kgs a week. Approx. 61cm x44cm x68cm (24"x 17"x27"). Every model includes manual & free delivery most UK.

Maxis and **Supermaxis** are ideal for small catering outlets and B&Bs.

All the above models require worms as extra. We recommend about 4000 composting worms for the Maxi, 3000 for the Midi & 2000 worms for the Mini units. We guarantee fresh, healthy breeding stock straight from the grower. They come in a special bedding material to ensure that the worms not only travel safely but also to provide them with familiar quality food and bedding once introduced into the waste buster. Our worms will continue to breed & be self-generating after the initial purchase. Developed by George Pilkington of Nurturing Nature the Waste Buster series of wormeries are highly efficient and very easy to use. The only wormeries made commercially from FSC wood.
